

Future actions regarding Apache Log4j

Thank you for your continued patronage of Riikunlog.

The following is information about Apache Log4j, which has been reported one after another in recent days.

All of our services are not running on VPS and we can't control the server directly, so we'll wait for the Apache side of the server to respond to this issue, but basically we're using Nginx. If you have any questions, please don't hesitate to contact us.
